AI Technical Product Manager with experience in scalable Kubernetes (k3s) environments, LangGraph AI agents, and C-level requirements translation. Proven ability to build high-impact automation products and cut cloud server costs by 40%. Known for acting as a strategic shield for engineering teams to prevent scope creep and translate complex business needs into clear daily tasks.

WORK EXPERIENCE

Korea Institute of Business Analysis & Development, Seoul, South Korea May 2026 – Present

AI Technical Product Manager

- Translate C-level business goals into clear technical tasks for AI automation
- Act as a shield between executives and engineers, managing the backlog to save time and block scope creep
- Lead and train an engineering team to build LLM agents using LangGraph and data pipelines
- Built and launched 'Quali-fit', an internal HR and recommendation system that instantly improved work speed (<https://quali-fit.bit-habit.com>)

Bithabit, Seoul, South Korea Aug 2024 – Present

Creator & Full-Stack Engineer

- Built and launched a real-time habit-tracking app used daily by a core group for over 2 years, winning 2nd Place at the IITP Hackathon (<https://habit.bit-habit.com>)
- Cut video processing server costs to \$0 by moving GIF generation directly to the user's browser using Web Workers
- Set up a secure password-free login system (Email OTP) and built real-time chat using WebSockets
- Hosted the app and 12+ other services on a self-managed Kubernetes (k3s) cluster, automating TLS security and network routing

Concentrix Service Korea(Microsoft Support), Seoul, South Korea Aug 2025 – Nov 2025

M365 Technical Support Engineer

- Ranked #1 out of 20+ engineers with a 93.7% success rate by solving hard MS Entra ID and cloud migration problems
- Created the 'Fireteam' study group to level up the team's tech skills, and worked as a MS Global Tester

FPT Software Korea, Seoul, South Korea Oct 2024 – Jul 2025

Embedded Technical Support Engineer

- Fixed hidden system errors using memory reverse-engineering and low-level network debugging

SKILLS

- AI & Product Management: Technical Product Management, LangGraph, LLM APIs, Prompt Engineering, MLOps
- Cloud & Infrastructure: Kubernetes (k3s/K8s), Docker, Oracle Cloud(OCI), AWS, Traefik, Terraform
- Development & Systems: Python (Expert), C/C++, Unix Shell, SQL, Git Workflow

EDUCATION

École 42 Seoul Campus, Seoul, South Korea 2022 - 2024

Computer Science & Software Engineering

Pukyong National University, Busan, South Korea 2007 - 2014

Bachelor of Science in Industrial Engineering

GPA: 3.6
